DETAILED ACTION

Specification

1. The abstract of the disclosure is objected to because it comprises more than one paragraph, and the use of the legal term "means" on line 6 of the abstract. Correction is required. See MPEP § 608.01(b).

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1, 2, 5-7, and 10 are rejected under 35 U.S.C. 102(b) as being anticipated by Kishline et al. (2,842,063).

Kishline discloses a water pump (Fig. 2) comprising a pump body 11; a pump shaft 7 which is rotatably supported by the pump body in a piercing state, and to which an impeller 10 is attached at one end portion; a mechanical seal 26 which is disposed elastically via urging means, between the pump body and the end portion of the pump shaft where the impeller is attached; and an engage mechanism 45 which is disposed between the pump body and the end portion of the pump shaft opposite to the side where the impeller is attached, while engaging the pump shaft to the pump body against the urging force of the urging means wherein the engage mechanism comprises an annular member which is rotatably fitted to the pump shaft while

contacting the pump body, and a cylindrical engage pin 46 which pierces the pump shaft in the diameter direction while sandwiching the annular member with the pump body;

wherein the annular member is formed so that the cross section in the diameter direction is roughly circular (Fig. 2); and

wherein the impeller is attached integrally to the pump shaft (Fig. 2).

Allowable Subject Matter

4. Claims 3, 4, 8, 9, 11, and 12, due to the limitation of the annular member comprising a flange formed at the circumferential portion so as to face the end face of the engage pin, are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Prior Art

The prior art made of record but not relied upon is considered pertinent to applicant's disclosure and consists of 2 patents.

Flick (2,170,134) and Tamba et al. (4,784,088) are cited to show water pumps each having a pin on its shaft.
